Education

University of Toronto

Bachelor of Applied Science in Computer Engineering & PEY Co-op

Toronto, ON

Sep. 2026 – Expected 2031

St. Theresa of Lisieux Catholic High School

4.0/4.0 GPA; Advanced Placement; Honour Roll

Richmond Hill, ON

2022 – 2026

Experience

The Actually Company

Co-Founder & Chief Technology Officer

Toronto, ON

May 2026 – Present

- Co-founded and architected a local-first AI speaking coach that analyzes recorded pitches, presentations, and speeches on-device, delivering timestamped, evidence-linked feedback on filler words, pacing, vocal delivery, posture, hand gestures, and body movement. \$1k MRR, 200+ active users
- Built the end-to-end platform with Next.js 16, React 19, Electron, FastAPI, FFmpeg, faster-whisper, and MediaPipe; synchronized word-level transcripts, audio features, and pose landmarks into deterministic analysis pipelines backed by 150+ automated tests.

Founders, Inc.

Founder in Residence – Off Season II

San Francisco, CA

Jun. 2026 – Aug. 2026

- Selected as one of 100 builders from 10K+ applicants for Founders Inc. Off Season II; developed the product in San Francisco with \$50,000 in credits.

STL Robotics – VEX Team 82855Z

President (Jun. 2025 – Present); Team Captain & Lead Programmer (Sep. 2022 – Present)

Richmond Hill, ON

- Built C++ controls software using odometry, feedback control, motion profiling, and particle-filter localization; contributed to a VEX High Stakes world-record autonomous routine and a 80th-place global Skills ranking among approximately 20,000 teams.
- Designed and iterated competition mechanisms in Autodesk Fusion 360, integrating sensors, actuators, and software under strict size, power, and match-time constraints; earned the 2025 Ontario Provincial Build Award.
- Led a 56-member organization, managed a \$140,000 annual program budget, and mentored six teams to six Provincial and four World Championship qualifications; founded a free robotics outreach program.

Projects

S-KBD67 | C++, Python, ESP32/ESP8266, MPU6050, UDP | Finalist at Hack The North 2025

Sep. 2025

- Embedded an IMU, joystick, and buttons into a Nerf blaster; applied Kalman filtering to motion data and streamed high-frequency wireless packets to turn physical actions into first-person-shooter controls.
- Built a low-latency Python UDP pipeline that calibrated and decoded sensor streams into mouse and keyboard events; selected among 12 Hack the North finalist projects from 1,200+ hackers.

King of the Ring | JavaScript, Node.js, Three.js, WebSockets | 1st Overall at EurekaHacks 2026

May 2026

- Developed a threshold-based motion-recognition system from smartphone accelerometer, gyroscope, and orientation data to classify punches, blocks, and dodges in real time.
- Created the Three.js split-screen arena, motion overlays, and gameplay animations and integrated them with a WebSocket game loop; won 1st Place Overall at EurekaHacks 2026.

Saturn | JavaScript, Node.js, Discord API

Jan. 2021 – Jun. 2021

- Built and deployed moderation, logging, and server-management systems used by 40,000+ users across multiple Discord communities.

Technical Skills

Languages: C++, Python, TypeScript/JavaScript, C, Java, SQL

Embedded & Robotics: ESP32/ESP8266, Arduino, VEX V5, PROS, RTOS concepts, IMUs, sensor fusion, odometry, controls engineering, motion profiling, particle filters

Software & Networking: Node.js, React, Flask, Three.js, REST APIs, UDP, WebSockets, Vitest, Git, Linux, CMake

CAD & Data: Autodesk Fusion 360, OpenCV, NumPy, pandas, scikit-learn, TensorFlow
